EDUCATION

University of California, Berkeley

B.S. Energy Engineering

Berkeley, CA

Expected graduation: **May 2027**

Coursework: Introduction to Electric Power and Renewable Energy, Power Electronics, PCB Design, Three-Dimensional Modeling for Design

PROFESSIONAL EXPERIENCE

Pilawa Research Group • Research Assistant

Sep 2025 – Present • Berkeley, CA

- Redesigned and implemented a station safety system for high-voltage circuits, analyzing prior documentation, updating control software, replacing hardware components, replicating the system across multiple lab stations, and creating new safety protocols for all lab users
- Validated the safety system using PLECS circuit simulations and iterative testing to ensure compliance with lab safety standards

Zoox • Technical Program Manager Intern

May 2025 – Aug 2025 • Foster City, CA

- Streamlined program coordination by standardizing the Confluence documentation process and Jira usage across 5 different subteams
- Defined and implemented hardware quality and production KPIs (quality, safety, cost, yield) in collaboration with manufacturing engineering, aligning design intent with production constraints across prototype, early production, and full-scale manufacturing builds
- Designed four KPI dashboards, supporting the effort towards real-time data integration and active production quality monitoring
- Collaborated with the Experimental Engineering Team to automate data collection and analysis of hardware quality inspections, enabling trend analysis, root-cause tracking, and issue ownership for electrical and mechanical failures across multiple vehicle subsystems

CalSol • Battery Manufacturing Team Member

Jan 2024 – Jan 2025 • Berkeley, CA

- Built and validated Lithium-ion battery pack assembly and manufacturing, contributing to the completion of a 17-module pack for solar car racing, ensuring optimized energy output, long-term durability, and strict adherence to safety and performance standards
- Designed and manufactured battery mechanical and electrical interfaces in CAD, optimizing structural integrity and electrical conduction
- Contributed to battery changes by aiding in PCB KiCAD redesign, battery pack configuration engineering, and integrating new components (tabs, thermistors, and sensing components) to reduce battery pack size and thermal spikes, and enable health monitoring
- Gained hands-on experience with high-current systems, pack assembly, and manufacturing best practices in a safety-critical environment

US Department of Energy • Solar Manufacturing Intern

June 2024 – Aug 2024 • Remote

- Evaluated material quality and supplier variability from a manufacturing-scale perspective, performing detailed sensitivity analyses to quantify how chemical input variability affects yield, reliability, process stability, and scalability in solar cell manufacturing
Developed a Python-based model coupling material properties, efficiency assumptions, and manufacturing parameters to analyze how design and process decisions propagate through cost, performance, and throughput at scale, directly informing pricing models
- Collaborated with NREL to model how upstream manufacturing decisions influence downstream electrical system costs, explicitly linking component-level material and process choices to system-level performance, deployment feasibility, and cost competitiveness

LEADERSHIP EXPERIENCE

Phi Beta Lambda Consulting (FBLA PBL) • Vice President of Projects

Aug 2025 – Present • Berkeley, CA

- Directed a team of ten project managers through client sourcing and project execution, providing training in team management and discussion facilitation to strengthen leadership capabilities, ensure seamless client communication, and secure a 50k+ revenue
- Supported club presidents with recruitment, business operations decisions, and curriculum development for a club of 120+ members

Alpha Delta Pi • Director of Professional Development

Dec 2024 – Present • Berkeley, CA

- Connected chapter members with 20+ prevalent alumnae and industry professionals to provide personalized career guidance and support
- Organized workshops, networking events, and interactive training on resumes and interviews for 170+ chapter members

SKILLS

Programming & Data Analysis: R-Studio, Python, MATLAB, Looker, SmartSheet

Engineering Design: CAD, SolidWorks, PCB Manufacturing, KiCad, PLECS

Research: Academic Literature Review, Technical Reports and Presentations, Supply Chain Modeling

Other: Korean (proficient), Google Suite, Microsoft Office, Jira, Figma, Confluence, Market Research, Team Management
